

Important: A client, [Good Harvest Bakery](#), will be used throughout this sample submission. You may NOT use the Good Harvest Bakery client for your project.

For the Touchstone Tasks and final Touchstone, you must select one of the three approved clients from the list provided in [Client Scenario and Criteria](#) - Bloom Valley Nursery, ABC Fitness Studio, or Book Haven Bookstore.

Name: Sophia Student

Date: 01/17/2024

Task 3.2: Storing Data with Web Storage

Overview

In this Touchstone task, you will store and retrieve data using web storage. Specifically, you will do the following:

- Use sessionStorage to add items to the shopping cart as a part of the implementation of the “Add to Cart” feature on the Gallery webpage.
- Retrieve information about the added items in the shopping cart using sessionStorage as a part of the implementation of the “View Cart” feature on the Gallery webpage.
- Clear items from the sessionStorage as a part of the “Clear Cart” and/or “Process Order” features.
- Add customer feedback/custom order information to the localStorage from the web form in the About Us/Contact webpage.

Document any issues or errors you encounter in your code development that prevent your stylesheet or webpages from functioning as intended.

Remember, the component colors, font colors, and typography styling should be consistent with your choices in Task 1 and should be appropriate according to the client description.

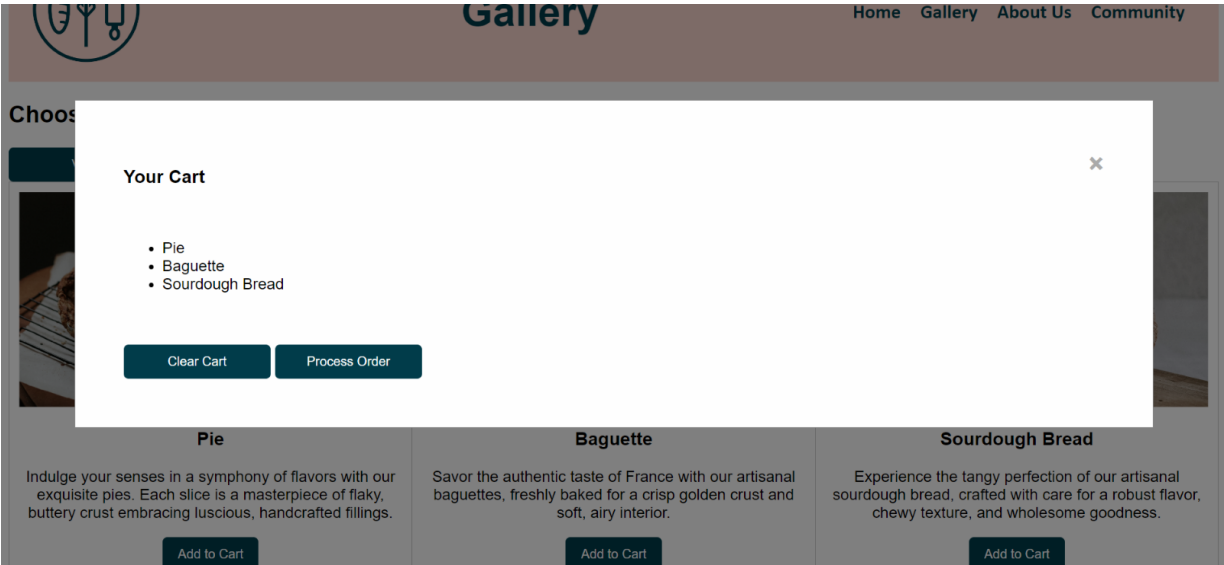

Instructions

Provide your responses in the following table.

Shopping cart items Screenshot

Hint: Provide the screenshot for the shopping cart window displaying the item information.

- The “View Cart” modal window should display the item information by reading from the sessionStorage.

Shopping Cart Empty Screenshot

Hint: Provide the screenshot for the shopping cart window when the cart is cleared using the “Clear Cart”/“Process Order” button.

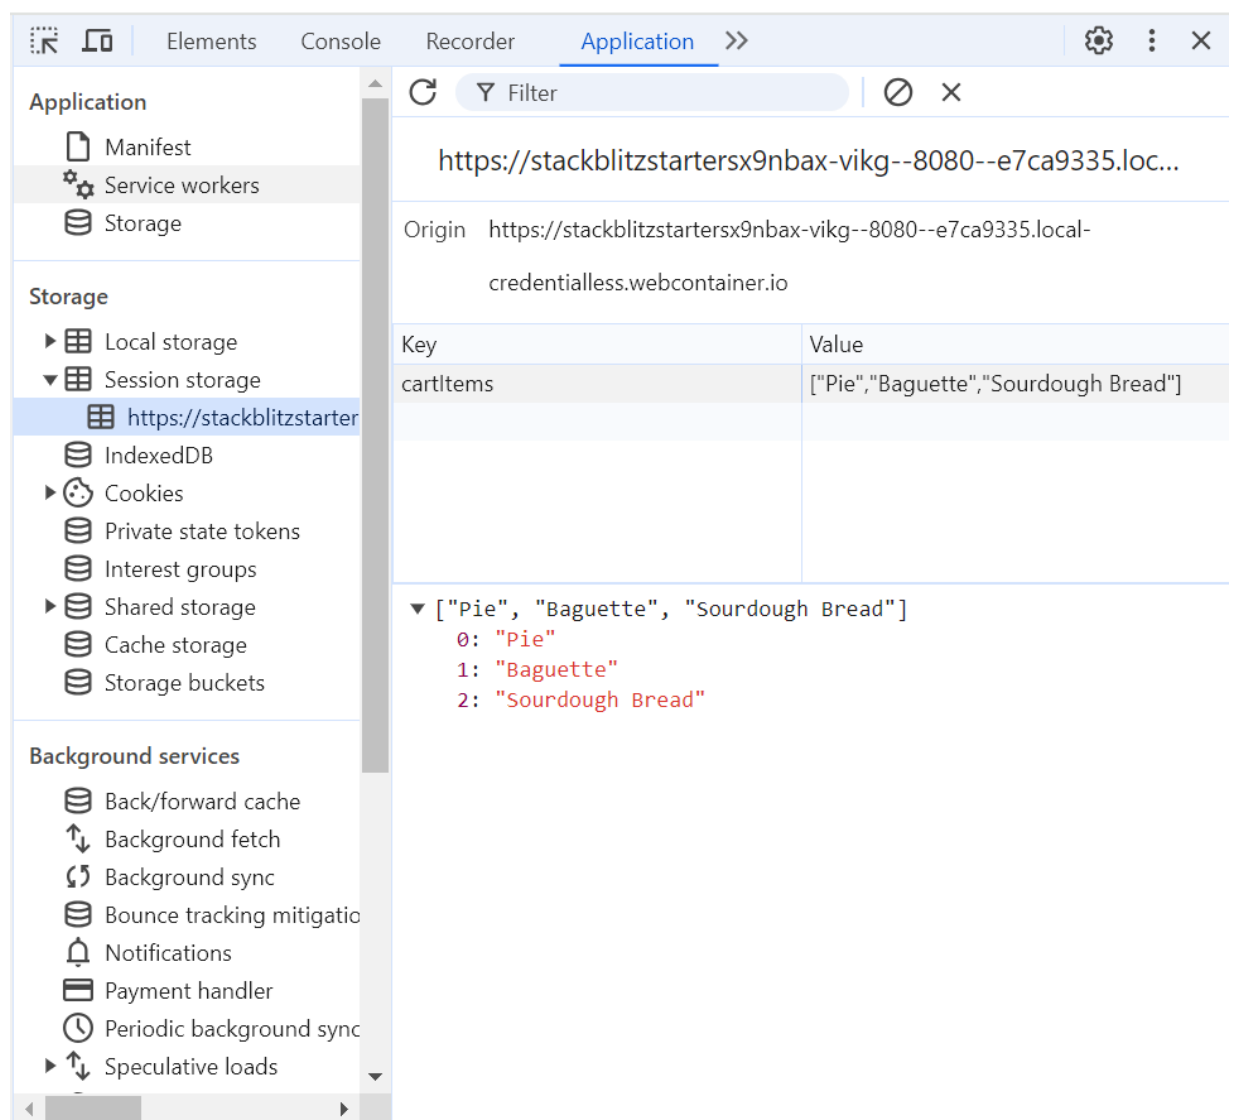

- The “Clear Cart”/“Process Order” button in the modal window should clear all the item information in the sessionStorage.

Browser sessionStorage Screenshot (Before Clearing Items)

Hint: Provide the screenshot of the browser sessionStorage after adding the items and before clearing the items. Use “Ctrl” + “Shift” + J to open the browser console window in the Google Chrome browser, click the “>>” button, and select “Application.” Then, find the sessionStorage under the Storage category.

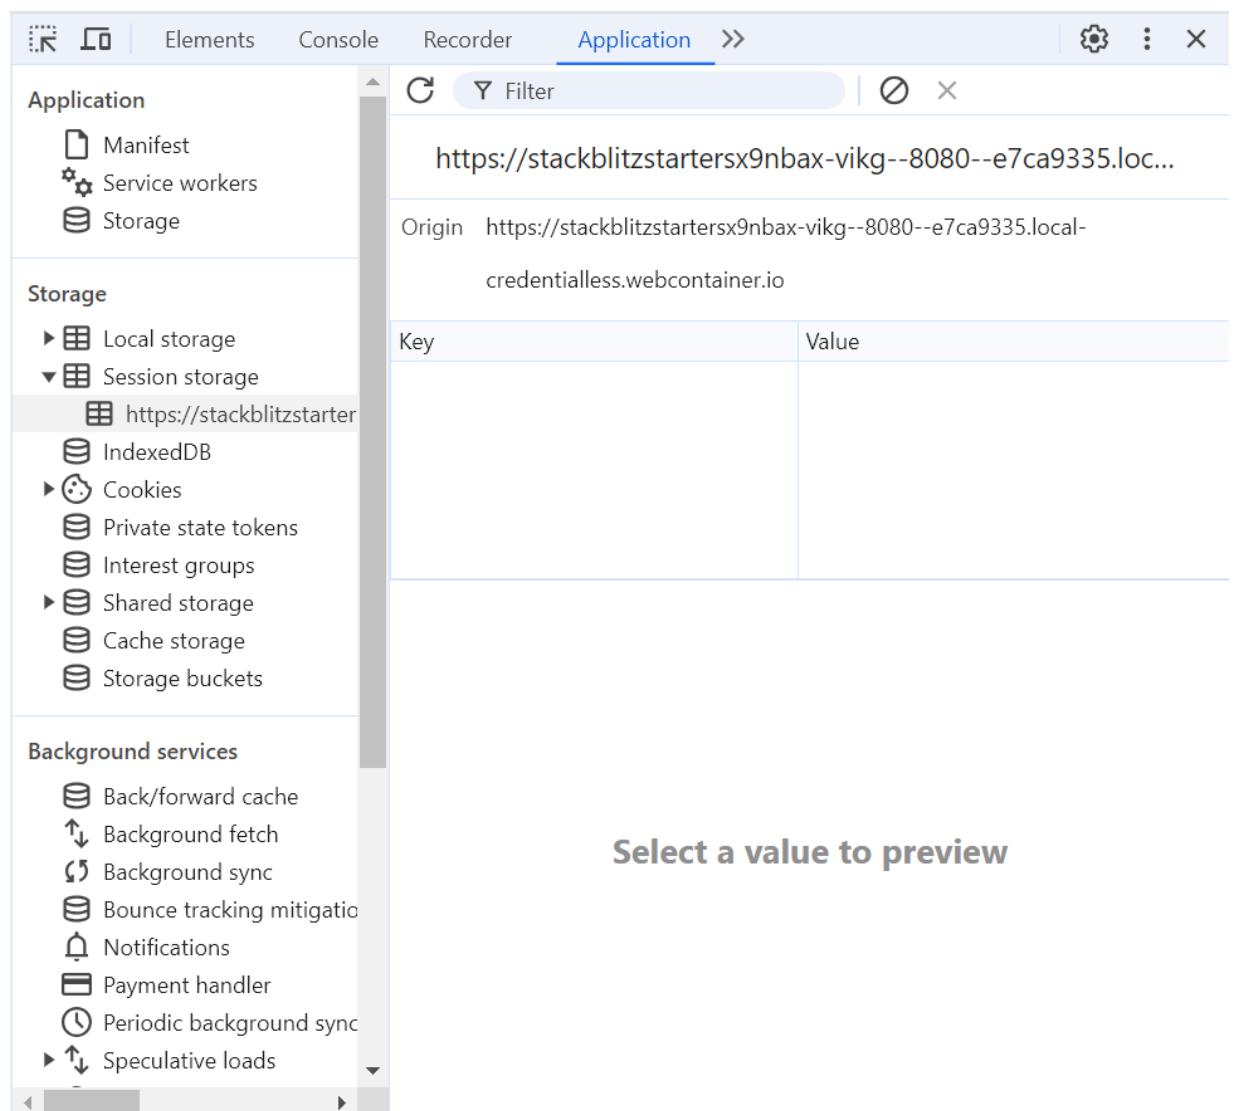

- The sessionStorage should show all the items currently added to the shopping cart.

Browser sessionStorage Screenshot (After Clearing Items)

Hint: Provide the screenshot of the browser sessionStorage after clearing the items. Use “Ctrl” + “Shift” + J to open the browser console window in the Google Chrome browser, click the “>>” button, and select “Application.” Then, find the sessionStorage under the Storage category.

- The sessionStorage should be empty as all the items are removed from the sessionStorage.

Shopping Cart Analysis

Hint: Provide a brief description of how the web storage was utilized in implementing the shopping cart.

- ⌘ Every time the “Add to Cart” button is clicked for an item on the Gallery page, the item is added to the sessionStorage.
- ⌘ The “View Cart” feature checks for all the entries in the sessionStorage and displays the information of all the items in the sessionStorage in the modal window.
- ⌘ The “Clear Cart” and “Process Order” features remove the entries from the sessionStorage.

Custom Order Screenshot

Hint: Provide the screenshot displaying the About/Us webpage.

- Add custom order information to the localStorage from the web form in the About Us/Contact webpage.
- The custom order web form should save the customer information and feedback/custom order information in the localStorage.

Thank you for your message, John Doe!

OK

Browser localStorage Screenshot (after submitting form)

Hint: Provide the screenshot of the browser localStorage after submitting the form in the About Us/Contact page. Use “Ctrl” + “Shift” + J to open the browser console window in the Google Chrome browser, click the “>>” button, and select “Application.” Then, find the localStorage under the Storage category.

- The localStorage should display the customer information and the feedback/custom order information.

Custom Order Information Analysis

Hint: Provide a brief description of how the web storage was utilized in storing the custom order information.

When the "Submit" button is clicked for the Contact Us form on the About Us webpage, an object is created with the submitted information containing the user's name, email address, phone number, and feedback/custom order information. That object is then saved in the localStorage.

Testing and Error Reporting

Hint: While writing and testing your code, record any errors, and state your approach to fixing the errors. Did the outcome look the way you expected? Did you find anything particularly difficult to accomplish?

I followed the details in the lesson and did not have any issues with my code.
